

Chatbot Simulation

Description: DCBSD's development projects mainly revolve around the promotion of Chatbots for our internal and external clients. So, we would like you to create a simple Chatbot. Feel free to be creative as you want with your Chatbot, what is important is we want to know your journey in making it.

Objective: Set up an emulator and create a simple Chatbot.

Pre-requisites:

DCBSD Chatbots utilize Azure's bot framework (sdk4). Code is open source and can be found here:

<https://github.com/microsoft/botframework-sdk/#bot-framework-sdk-v4>

You can view samples of many scenarios in the same link. Feel free to create your Chatbot in any language.

Bot Framework SDK v4

The Bot Framework SDK v4 is an [open source SDK](#) that enable developers to model and build sophisticated conversation using their favorite programming language.

	C#	JS	Python
Stable Release	packages	packages	packages
Docs	docs	docs	docs
Samples	.NET Core , WebAPI	Node.js , TypeScript , es6	Python

Channels and Adapters

Sidenote:

You may also want to try to develop this using Agents SDK (and I would prefer it if you do so)

See: <https://github.com/microsoft/agents>

While DCBSD's current chatbots are built on SDK v4, we continue to evolve our products and transition to newer platforms. Exploring the Agents SDK could help ensure better alignment with our long-term technology direction and future development initiatives.

Output: A responsive chatbot that takes in Name, Mobile, and Address as inputs then display all the taken inputs back to the user. Program must verify mobile number format and have validation if information does not look valid

Bonus : Integrate Microsoft Adaptive Cards in the process.

<https://adaptivecards.io/designer/>

The screenshot shows the Microsoft Adaptive Cards Designer interface. At the top, there is a header with "Adaptive Card" on the left and a blue button labeled "Try it Yourself >". Below the header, the main content area is titled "Input.Text elements". It contains several form fields: "Name" with a red asterisk and a text input field containing "Enter your name"; "Homepage" with a text input field containing "Enter your homepage url"; "Email" with a text input field containing "Enter your email"; "Phone" with a text input field containing "Enter your phone number"; "Comments" with a larger text input field containing "Enter any comments"; "Quantity (Minimum -5, Maximum 5)" with a numeric input field containing "1"; "Due Date" with a date input field containing "09/20/2017" and a calendar icon; and "Start time" with a time input field containing "04:59 PM" and a clock icon. Below these fields, there is a section titled "Input ChoiceSet".

For Submission: Submit via email a video demonstration of the output of your chatbot. Include a quick description of how you did it and any obstacles encountered along with their resolution.

Deadline:
